Code

JupyterLab Python 3 (ipykernel)

```python
[82]: cliff = CX(0, 1)
      gadget = Gadget('YZ', phase=1/2)
      circuit = GadgetCircuit([gadget])
      circuit.apply(cliff, draw=True)
```

```python
[6]: ############################################################################
     %cd /Users/ayman/Documents/Dev/zxfermion
     %load_ext autoreload
     %autoreload 2

     import json
     import pyzx as zx
     import numpy as np
     from copy import copy, deepcopy
     from itertools import combinations
```
